

KOREK LAND COMPANY, INC.

~1,275 ACRES – PRIVATE LAND, INYO COUNTY

LOCATION: The Property is in Owens Valley ~5 miles east of Hwy 395/ town of Independence, at the base of the Inyo/White Mountains, within Sections, 17, 18, 19, 20, 28, & 29, in T13 S, R36 E. - Mt. Diablo B&M, Inyo County, CA 93562. Just south of the cities of Bishop and Mammoth.

DIRECTIONS: Mazourka Canyon Rd. intersects Hwy 395 at the south end of Independence. Proceed east along Mazourka Canyon Rd., as noted in the following milestones (**Our full package has maps showing the directions**):

- Proceed past the L. A. Aqueduct and Owens River to the end of pavement at the Kearsarge-Depot-historical marker/railroad tracks (Bench Mark 3763 is at this location). Then the Property is reached by very easily in one of two ways:
- **Either:**
 - Proceed east ~0.3 miles from the end of the pavement and turn right on the first dirt road; shown on our maps as Dirt Rd. A. The Property's western boundary/Section 18 is about 0.5 miles along Dirt Road A. Continue along Dirt Rd. A to intersect with Dirt Rd. B
- **Or, alternatively:**
 - Proceed east from the end of pavement (cumulative 6.1 miles from Hwy 395) and turn right on the dirt road, shown on our map as Dirt Rd. B. The Property boundary is about 0.75 miles south along Dirt Rd. B. This north-eastern corner of the Property is in Section 17.
 - Dirt Rd. B intersects with Dirt Rd. A. ~1 mile south of the last turn.

HISTORY: In about 1866 a stage coach line ran north-south up the Owens valley and in 1883 the Carson & Colorado railroad was constructed to carry both passenger and freight. The Kearsarge Depot was constructed near the Historical Marker location. The rail line was abandoned in the early 1960's. Mining in the area has been underway for more than a century. During this time the area flourished agriculturally.

PROPERTY: According to the County only ~1.7% of Inyo County land is privately held. This private Property (APN 22-210-10 and 22-220-13) is one of the largest privately held parcels in the County. The site is on the valley floor, at about 3,400' to 3,900' elevation, with commanding views of the High Sierras, the White & Inyo Mountains and Mt. Whitney (14,505'). The topographic expression is about a fairly consistent slope from the northeast (high) to the southwest (low); ideal for solar energy utilization.

WATER: In the past, 2 very productive water wells existed on the Property; The most easterly well site is near the NEC of the Dirt Rd. A & B intersection, in section 17. The other well site is on the north side of Dirt Rd. B., about 0.1 mile west of the Dirt Rd. A & B intersection. We have no information on the current well-casing condition. Neither well site has any equipment presently. One possibility is to slant drill along the lower elevations of the Property to release water by gravity flow in order to save well operations energy costs.

- Some years ago a 96 hour-well-production test was conducted by independent engineers showing that each well produced ~450 GPM (2 Ac. Ft. per day) with a remarkably low drawdown of under 40'. The water table ranged from 40 to 235 feet.
- A geo-hydrological assessment estimated the underground-water-recharge rate at an impressive ~3,000 Ac Ft / year (~325,000 gals /Ac Ft). This amounts to almost 1 Billion gallons of fresh-snow-melt water.
- There is water demand from local-ranchers as well. A water trade perhaps could be negotiated.

In 2007 Babcock Labs ran a water-quality analysis with excellent results. The total hardness was only 200, Nitrates of 1.4, and turbidity of 0.22 are all consistent with or better than bottled drinking water.

ENERGY: Inyo County has conducted an EIR concerning County wide large-scale-renewable-energy plants. The site is conducive to solar/wind-energy production given the topographic north-east to south-west orientation and solar/wind intensities. This could lead to Property usage that would be completely "off-the-grid".

FARMING: The Owens Valley has a rich agricultural history. The alluvial soils may be suitable for a number of productive crops including nuts, fruit trees (i.e. apple, cherry), vineyards, and lilac. Greenhouse crops may also be viable for a number of specialized vegetable crops which are presently imported from the middle-east and Mexico). Medical marijuana growing in a green house may also be possible.

- BUSINESS:** Explore business strategies to compliment farming and energy:
- Start or expand a craft brewery production facility.
 - Bottle 325,000 gallons of water annually (~1.4 million 12 oz. containers)
 - Create a Golf-course-resort-style community, a spa-type-health resort, a meditation-retreat and/or primary/secondary housing opportunities.
 - Hunting, fishing, backpacking, horseback riding and other recreational opportunities abound in the area.
- ZONING:** Inyo County Resource. **BUYER TO VERIFY ZONING AND THAT IT WILL ALLOW BUYER'S INTENDED USE.**
- PRICE:** Price reduced to \$7,000 per acre. Evaluate the Property from your point of view and **make an offer!** A previous appraisal estimated the Property value at around \$20 Million
- FINANCING:** Seller carry back financing with reasonable terms is open for discussion on half the Purchase Price. **Seller is motivated!**
- CONTACT:** Larry Lynch (CaDRE 01180573) at (818) 787-3077 or email larry.lynch@korekland.com for additional information.
